**Diagnosis/Definition:**

Loss of glasses or contact lenses is not a medical emergency. Patients should be counseled at regular care visits to maintain a backup pair of glasses (their “old pair” is fine in a clutch) as a temporizing bridge to the replacement of lost spectacles or contact lenses.

**Initial Diagnosis and Management:**

The most efficient way to create a backup pair of glasses for perceived emergencies is to have the patient contact the last provider of glasses to look up the prescription and have an inexpensive pair created. Often times a broken pair can be examined and the prescription can be determined and re-created. The Ophthalmology Service at DHMC cannot dispense glasses or contact lenses to patients. A follow-up appointment will be made to remeasure the patient’s refractive error to derive an up-to-date prescription if desired. Contact lens services are limited only to Denver Health Medical Plan members on a limited basis.

**Ongoing Management and Objectives:**

Regular reminders to maintain a viable backup pair of glasses helps avoid perceived emergencies.
