Behavioral Health and Substance Use Concerns in Pediatric Emergency Medical Settings

DESIGNED FOR EMERGENCY DEPARTMENT (ED) PROVIDERS, INCLUDING MEDICAL RESIDENTS, NURSES, SOCIAL WORKERS, AND PSYCHOLOGY TRAINEES

This interactive, fast-paced, avatar-based training features four unique scenarios designed to support providers who encounter young patients presenting to emergency care with behavioral health or substance use concerns.

In this training you will learn:

- To identify and begin management of common behavioral health and/or substance use disorders affecting adolescents in the ED, including depression, anxiety, suicidal ideation, self-harm, gender dysphoria, disordered eating, and substance use.
- To recognize how behavioral health, substance use, and social determinants of health can impact a patient's medical concerns, their ability to access care, and/or their ability to follow-through with recommendations for treatment and follow-up.
- To apply evidence-based methods of assessment and management of behavioral health and substance use disorders.
