Agency Description and Services Provided
The Neuropsychology Consultation Service is housed in Outpatient Behavioral Health Service (OBHS) which is an integrated interdisciplinary department providing multiple treatment modalities and levels of care for a variety of behavioral health problems, ranging from evaluation and consultation to intensive outpatient services. Externs on the Neuropsychology Consultation Service participate in clinical training activities including the provision of comprehensive outpatient neuropsychological evaluations for a wide range referrals. While some referrals come internally from OBHS or other areas of Denver Health, the Neuropsychology Consultation Service also accepts outside referrals such as from local neurology practices.

The team consists of three neuropsychologists, one rehabilitation psychologist, two psychometrists, a neuropsychology intern, and the neuropsychology practicum student. From July to January, while the neuropsychology track intern is on the rotation, didactics are held twice a week and include seminar topics in neuropsychology, journal club, case conceptualization, and fact finding. There also are ad hoc research meetings. Although there may be opportunities for the practicum student to participate in research, the focus of this practicum position is clinical.

Type of clients served:
Adults with any presenting neurological, mental health, substance abuse, or developmental problems. Participation in providing Spanish bilingual neuropsychological evaluations may be available for those with appropriate Spanish fluency skills.

Culturally diverse groups served: approximate percent of client populations:

Native American < 1%	Asian < 1%
African American 10%	Latinx 40%
Caucasian 50%	LGBTQ 5%
Transgender < 1%	Patients with disabilities 50%

Underserved/Health Equity Challenged >75%

Supervisors' experience in training students to work with culturally diverse groups: The supervisors provide culturally competent neuropsychological services and supervision including increasing students' knowledge of cultural issues in neuropsychology (e.g., language, disability, age, gender, educational attainment, SES, stimulus value, etc.) by use of discussion, case conceptualization, readings, and other appropriate resources.

Special Notes on Suitability:

This is a position for a student with advanced competencies (i.e., generally, third-year or beyond). The practicum student must have completed assessment sequence coursework, have actual clinical assessment experience (e.g., WAIS-IV and personality/mood instruments), and have basic neuropsychology coursework. Clinical experience (e.g., therapy) with adult clients is required. *Practicum students with career interests in neuropsychology are especially encouraged to apply.*

Application, Interview Requirements, & On-boarding Requirements
To apply, please submit a CV and cover letter describing your assessment experience and career goals. Applicants invited for interview will be scheduled for a one-hour interview with Drs. Pierce, Peraza, and Rivera Figueroa. If selected, the practicum student must register for and use My Clinical Exchange (information will be provided if selected). **Criminal background checks and finger printing are required for all students.**

Duties of psychology trainee:
This position will be assigned to the Neuropsychology Consultation Service. Clinical training will include outpatient adult neuropsychological evaluations for a wide range of referrals such as traumatic brain injury, dementia, neurobehavioral and psychiatric disorders, epilepsy, brain tumor, MS, and other neuropathologic conditions. The student will become familiar with the assessment process, conduct interviews, administer a breadth of neuropsychological measures, and prepare a clinical report of the results. Depending on schedule, the student may have the opportunity to attend various other training opportunities, and experience contact with psychiatrists, neurologists, neurosurgeons, physiatrists, primary care physicians, radiologists, and other healthcare providers.

Supervised by: Christopher A. Pierce, Ph.D., ABPP, Jennifer Peraza, Psy.D., ABPP, Karla Rivera Figueroa, Ph.D. Possible supervision by rehabilitation psychologist, Gina Signoracci, PhD, ABPP, depending on schedule.
Supervision Format: Individual, group, and curbside with licensed psychologist; tiered supervision with neuropsychology intern
Number of psychology trainees: 1
Number of hours/week trainee works: 16–20
Pay: None.

Dates for Recruiting Trainees: We will begin accepting and reviewing applications beginning 1/9/2026. The position will be open until filled.

Special Note:
